

# APPROACH of PREDATORS

Jackal calling layout for success and approach angles, and what he will do and 10 to one WON'T do. **CROSSROADS**

This small drawing will help you when calling, BUT you need to use two calls as usual for better results.

This may help you with a general calling system.

NOTE;

I am using two calls here, RED X and wind is right to left, the food call is into the wind, and the field is open on this side and the calls are both placed at the other side as that's the bushy or Karoo bush side.
