

# BROOM MARKING WHEN CALLING JACKAL / CATS

Here is a trick nobody will have told you on any predator calling course – it works like a bomb!

Between the spots you mark out to call that night between every one make a line across the sand road 70cm wide, and on the way back to the calling spots check each one to see if any fresh tracks are imprinted in the sand, if you get tracks, stop and call straight away, when you draw a line get good open areas with good vision.

Mark spots 800m apart, and in between use a broom over the road 70cm wide. Work back to the spots **INTO** the wind, mark out the spots **WITH** the wind.
