

EAGLE TAC

INFRA RED ILLUMINATOR

For more info on these systems for use to control Jackal, contact Gary directly.

Phillips OSRAM 850nm IR LED. The best on earth, made in the Netherlands.

Photo is on my night vision binoculars.

These are not normal torches, they are INFRA RED

The Eagle Tac unit I use here normally one will be ok, I use 2 most times, plus the infra red tactical illuminator as shown on the right.

By using night vision, predators come closer, faster, more determined, less stressed, more direct and you can observe the body language, you cannot compare using night vision to red light hunting, they don't come close.
