

EAGLE TAC LIG OP JAKKALSE / ROOIKATTE

If you look at my website and look under **NIGHTVISION** you will see loads of info, and in that you will find EAGLE TAC, if you are using nagsig and want better illumination then buy an Eagle Tac.

Eagle Tac infra red illuminator

I use a variety of equipment with night vision and I recently switched to EAGLE TAC illumination infra red torches, it was one of the best choices I have made recently.

Here are photos of the torch and I have one on my rifle night vision scope and also on my night vision binoculars.

The brackets on top are for other extras I use on the night vision; the light on the RIGHT is a tactical infra red torch just another light to give me even more infra red light at night.

If you want great vision get an INFRA RED EAGLE TAC, they are awesome.

The torch has a pressure switch as shown in the top photos on the rifle.

This system of mine has given me exceptional hunting pleasure, it has been the downfall of many predators that came in on pitch darkness and never had an idea I was watching them.

Here is a mail from a friend in the USA who gave me a little feedback....

It is an awesome unit with 3,400mW of IR, you could not have done better unless you spend \$500-600, it will reach out 500-600 meters easily.

You want the 3.4W IR one:

T100C2 MKII - IR (Infrared 850nm) 3.4w

It is totally awesome, I have half dozen of them, they work handheld, helmet mounted, rifle mounted whatever. Very powerful. They will light up 500-600 meters easily. You should have bought a couple of them, after you have one, you will want another.... **it has a Phillips OSRAM 850nm IR LED, the best on earth, made in the Netherlands.**
