

# PREDATOR WEATHER WEBSITE

This is the best website I have found that is great for calling, it even tells you what time the dew will fall and possibly damage your equipment etc, this is a great site, and it has everything we need.

<http://english.wunderground.com/cgi-bin/findweather/getForecast?query=Cape+Town>

The screenshot shows a Windows Internet Explorer browser window displaying the Wunderground weather website for Cape Town, South Africa. The browser's address bar shows the URL: <http://english.wunderground.com/cgi-bin/findweather/getForecast?query=Cape+Town>. The website header includes the location "Cape Town, South Africa" with coordinates (Lat: 34.0° S, Lon: 18.6° E, Elev: 42 m) and the current time (11:32 AM). A notification for "Tropical Weather: Tropical Cyclone Grant (South Indian Ocean) Tropical Cyclone Six (North Indian Ocean)" is visible. The main content area, titled "Weather at a Glance", provides a summary of the current weather: "Scattered Clouds", a temperature of 25 °C (feels like 25 °C), and a wind speed of 11 km/h. It also lists the sunrise (5:33 AM) and sunset (7:58 PM) times, and the moon phase (Waxing Crescent). A 6-day forecast is shown below, with temperatures ranging from 19 °C to 27 °C. The Windows taskbar at the bottom shows the Start button, several open applications (Inbox - Outlook, Internet Explorer, Document1 - ...), and the system tray with the time 11:35 AM.

Today	Tonight	Tomorrow	Wednesday	Thursday	Friday
27 °C	19 °C	25   16 °C	26   16 °C	27   17 °C	25   16 °C

The site has loads of pages that tells you everything you will need to know.

Hope this helps.
