

SHOOTING TIP ON GLASSES

Picture made large to show tint in glasses.

I shoot thousands of crows, and do a lot of day shooting – I would like to share a tip with other day hunters some know this and some dont! To those of you who **DONT** - this will help.

My general hit ratio is 7 shots 6 kills, this is what I generally do on crow hunts with a shotgun, I pick targets and dont just blaze away, HOWEVER in this past 2 years my ratio is now on a scale, 12 shots 1 miss. I have used normal glasses and then perscription glasses.

You **CANNOT** compare the difference, with perscriptions it is far better and not because it is perscription But because they are UV protected and have a film that protects the lenses.

I stare 99% of the time into the sky not looking at the sun, and the glare with and without them is very evident, READ THIS LINK about the sun, UV and glare etc

<http://www.glaucoma.org/treatment/a-guide-to-sunglasses.php>

My results now that I am using these glasses is amazing, and the difference in vision is superb, and when those crows fly in not many fly away.

HOPE THIS HELPS – Pay a little more and get good UV protected perscriptions.

Look at this invoice page, here is the UV.
