

TRAVELLING TRANSPORT

I often do jackal courses and mainly they are the FREE STATE every year, however a few things influence price changes and that's air travel, compared to road travel.

If you are in the market for a small car and want to travel far, and go hunting or whatever but want to go on your own and not be shunted into an aeroplane and go at your own speed, but scared of ever increasing fuel prices, here is the answer.

Those who know me, are fully aware I am an Isuzu guy, HOWEVER recent years have in my opinion seen the Isuzu product go down the ladder for farming transport, in the 90's all farmers used Isuzu 250D direct injection bakkies, NOW that's gone, the newer ones are nowhere near as good as the old models, and most farmers now go Toyota, in recent years I also became a Toyota guy and all I buy is Toyota.

THE ANSWER TO CHEAP ROAD TRAVEL

I purchased a **Toyota** for long distance travel and to beat fuel prices and wanted a reliable means of transport, what did I buy? Well it was not a hard decision; I purchased a **TOYOTA AYGO** in 5 doors with full house extras.

The car is very light on petrol, it gives a staggering 4, 3 litres to a 100 kilometres and on the open road is a very comfortable car, what I really like is the gear change, it has a very short throw and is exceptionally spacious inside, despite the outside appearance. The car is all around just what I need for my long range trips, and buying it new you get all the standard roadside backups etc with a service plan also.

When I bought my new car last year December, it had to stay on the dealers floor till 2nd January so I could register it 2013, so I paid and left it on the floor, I also got the 5 door car for R800-00 more than the 2 door version, and I paid R112, 000-00 for the car, a few months later its near R130, 000-00 already, but value for money it's a bargain.

It is a very nice looking car and has a real fast car appeal, but for the long road course provider as myself it is perfect, throw my books in the boot for the students and my clothes and off I go!

Here is the car in detail, if you want a small car, buy the Toyota Aygo it is a very good deal and its full house!

I really like the mags on this car, but at 4, 3 litres of petrol to 100 kilometres who would want to argue that these small cars are the entire rave now.

The Toyota looks very sporty and has really nice lines, but as some people have said when they saw it, the word sexy comes to mind -

Here is the windscreen sticker, note the fuel economy and emission rate. Say no more!

FUEL ECONOMY (Fuel Consumption and Carbon Dioxide Emission)		
TOYOTA AYGO		
Model	Comparative fuel consumption litres per 100km	Comparative CO ₂ emissions grams per km
1.0 3dr	4.3	99
1.0 5dr	4.3	99

The car is full house has all the extras an expensive car will have in it, basically leaves you with nothing to want, all I did was install a long range two way radio next to the seat and that's all.

For the long distance driver, this is a great car and super light on fuel.

Toyota Aygo
WILD
5 Door.
