

# RECORDS AND SOUNDS THAT WORK

## GELUIDE WAT WERK VIR JAKKALSE

I am often phoned and friends ask me what I think, they say “ek was gister aand uit en niks kom in nie” or something like that...

What I can say is I have been calling jackals for a few years now and in my time of calling I have tried many things and sounds, **I DO KNOW what works and what don't.**

It is important to write down what sounds you used at that same farm and what date, so next year it gives you an idea, it won't always work the next year but will assist you.

I use a system on farms I use my own digital callers, then the next time I use a Foxpro and I swop and change and use sounds that work, if I use a Foxpro these are sounds that **DO** work.

NOTE don't over call, don't call to much, don't call to loud and don't let sounds echo.

My last 3 hunts at one farm with my partner throughout the year, was March, December and March, hunt one was 12 jackals, hunt two was 12 jackals, 3 Rooikatte, and hunt three was 8 jackals, 1 Rooikat.

### SOUNDS that worked well.

#### **FOXPRO CALLER**

- Antelope Fawn
- Chicken Distress #1
  - Dying Jack
- Jackrabbit Distress
  - Luscious Lips

THESE  
SOUNDS DO  
WORK !!!!

## MY PERSONAL CALLER

I have a few sounds I do not sell, and these are my personal sounds, the one is a male jackal for March / April and another a territorial sound that I have success with about 70% of time when I use it, another with a mild jackal calling, known to me and my friends as the famous "10 barks".

The secret is sounds not all the Karoo jackals know and have heard, and sounds not sold by the hundreds by people in the CO OP, badly copied and scratchy.

Keep stats on your kills, place, moon, place, time, sound, date etc, it will tell a story, and next year try it again, it may work.

BUT these sounds above do work, buy a caller and use the sounds that work, just know the basics on how to call and hunt in general.

ALWAYS TRY USE 3 calls at the same time, minimum 2, place jackal vocal downwind barking now and again, and two food calls into wind and 50m apart, play one then the other etc, make it sound like the rabbits moving etc, it does work. Create a story to kill a jackal, then you will see how easy jackal hunting really is.

Happy hunting.

*Gary*

Remember it is not always the sounds that are not working, remember you can have all the good sounds, BUT if you don't know how to hunt and call these sounds wont help you at all, no matter how good they are!!!!!!!!.
