

BAKKIE ROOI LIGTE

Do you hunt at night and go to a few spots? Do you drive from one place to another with white lights? Yes?

Well, if you do then stop -  you are making a mistake!!!!

A long time ago I used to drive from place to place with white lights, I then tried this and ever since I use red lights on a trucks lights to get me from place to place. If it isn't on a public road at night I use red only. We hunted last year in Arlington, we drove up to and past buck, bat eared foxes, owls and also aardwolf that were not at all worried about us, the bakkie idled softly and we passed them all, none of them ran, they seemed less fazed by red as to white totally!

I cover the indicator lights with black material, making all the lights red really helps a lot, and driving on a farm road from place to place with red spooks the wildlife far less.

Here is a link to the course we give in Arlington, near Bethlehem, **look at the very last photo at this link** the bakkie with these filters works like a charm.

Try this, it really helps a lot, and on your next hunt DO NOT use white driving lights, use RED as long as its private ground.

RED BAKKIE DRIVING FILTERS
DIT WERK!!

The image below is normal lights, not bright- it gives you perfect driving lighting **(NOT ON PUBLIC ROADS!!!)**.

This photo is slightly overexposed but you can clearly see the covers, I cut them from red photographic filters and use masking tape to stick over the bakkies lights, it works well.

Using the red lights and driving with red from place to place does help no doubt about it, and with the spots and driving lights covered in red gives you perfect vision at night while driving – try this and see if you have better results from not spooking wildlife from place to place.
