

TRAIL CAMERA/ CAMERA/ FOXPRO SPITFIRE TRIPOD

Here is a locally made mount I made; I made this from a gas cylinder holder, it was a brilliant idea. Just fitted a top mount to it!

I took the top off the gas stove I had laying around, cut out the valve, and filed down the tread narrower, turned it upside down and it now makes a perfect tripod.

This was a good Friday afternoon brainwave, it took about 20 minutes to put together.

Very simple to make and it works equally as good as any other tripod, for electronic callers, cameras, trail cams etc...
