

BARGAIN JAKKALS JAG LIG

I had to go visit my mom recently and ended up at a local CHINA TOWN SHOP, Sable Square, and Milnerton – in Cape Town.

Just for the record I use a LED LENSER M-14 torch to scan at night instead of a big red light most times, and it's got a **MOERSA MOERSA BIG** L.E.D inside the torch, it throws a mean beam and runs on 4 penlights.

NOW; I was walking around and found a shop selling goodies, I then found this; it costs R30, 00 and has an LED in front that is twice as big as a LED LENSER, PLUS it also can be adjusted to throw a "KOL". This is ideal to walk in bush and shoot etc, it is awesome, I have used it now for 2 months, so far no problems, I am on my way to the farm in Free State now to give courses and I am taking it with.

It throws a mean beam and at 50m I can easily shoot a predator no problem, so if you pass a local China Town go grab one, it's worth the R30-00.

PLEASE NOTE, I am not saying its better than a LED Lenser, it isn't - but for general hunting etc its awesome, and it throws a long "KOL" it burns BLUEISH at close range, very nice torch for R30-00.

It may be cheap, but the light it throws is awesome – buy one!!!!
