

HEAD MOUNTED BARGAIN TORCH

PART 2

Here are a few pictures of the head mounted torches, we managed to shoot two jackals with the torch, one was 36m from us. March 21st 2012.

Just as example – I mentioned the LED Lenser bulb was smaller in the first part of this article; I have made a square in yellow on top of this LED to show you how big the LED Lenser's LED is in relation to this huge LED! This LED is huge compared to the small LED in the Led Lenser. You can see this huge LED behind my yellow square, I tried to get a better image, this was the best I could do.

Here are a few photos, the torch is a cheapie, but it can gooi a “kol” like you cannot believe.

PICTURES

We used these on our last hunt, they work very nicely, and flood or spot you can use them all night. For what you are paying it is a bargain.

LED CHEAPIE
MAAR HY GOOI!
