

LED LENSER L-7

I bought a new edition to my lighting as I like to take a small chair, and go call in the middle of the Karoo with nothing else but my gun, so I bought the new LED LENSER L-7. I fit it to my rifle as it weights zero, and I scan with it on my gun while turning the chair, I fit a thin red lens to it, or I use my night vision and use it to shoot, with this light I can shoot accurately out to 130m easily, don't let its small size fool you!

It throws a KOL very far and is awesome to hunt at night with. Cost only R230-00, very good buy and great light. **OR I scan with my LED LENSER M 14 and I shoot with this L7 on my rifle!**

Here are a few pics of my set up, hope this helps, but for general jakkalse jag is die LED LENSER L 7 BAIE GRAND! And the batteries last forever, you don't need big 12v car batteries en kak.
