

JACKAL HUNTING PLAN USING TWO CALLERS

I have used this layout often and it works very well especially with NIGHT VISION. USE both sides of the sand road to place the two callers. One a food call – the other a barking vocal sound.

This plan confuses a jackal, and he very often comes in at the wrong side when the wind does not favour him. Use a food sound 5 seconds on and a minute OFF. Go on three times, send a jackal social bark, and food, go 15 minutes then use a jackal fight (it sounds like fighting over food). Sit 45 minutes and don't overcall.
