

# Jakkals / Rooikat Skiet Stoele

## GROOT of KLEIN

We have developed two different styles of "skiet stoele" both that are user friendly and are easy to load on a bakkie, store or transport if you are man alone.

### GROOT STOEL

Chair comes in two parts; the seat can be easily loaded on a bakkie man alone, the remote control holder comes off so it is easier to lift / carry / transport. If the chair was a solid one piece unit it would be very hard to load and off load and basically impossible if you are on your own!

## **Cross chest rifle rest**

Below you can see the rifle in a cross chest resting position.

The base is separate and comes with the fittings to fasten to the rear of your bakkie.

Prices on request due to steel prices changing.

Chair is shown here with the rifle in the side position but I prefer it positioned across my chest, as this gives me faster target acquisition.

TOP CLASS  
CRAFTSMANSHIP  
TOP CLASS  
PERFORMANCE

The large chair is awesome and solid as a rock, but if you want to save money, and want a smaller chair we have the other side of the coin also! But having a big chair in two parts is a bonus, as loading is so much easier when on your own.

POA

## SMALL CHAIR

A really neat chair that can be either transported and picked up or moved easily, it can be carried easily if needed, but was designed to be lighter and cheaper than the large chairs.

Rifle lies in a cross your side fashion OR you can fit it straight up in front you, the chair can collapse, and has a neat bearing system. Really solid and very smart, once bolted on the bakkie it is as good as any larger chair.

The chair comes standard with a seat and basic carpet finish just to finish it off; the cushions are for the purchaser's attention.

The legs are made so they can adjust in the event you are sitting on ground that is not level.

12V battery area is a nice size to fit basically any make of 12v battery.

I am using a double bearing system to rotate the chair, it is not one pipe in another pipe, and this is a sealed bearing and dead quiet.

The front "V" is height adjustable

Due to prices ever increasing regarding steel, I cannot put a firm price on these two models. If you require info or prices, contact me directly.
