

# Jakkals en Rooikat Jag MOUNTAIN BIKE

We tested this out, and after 5 years we have decided to now reveal a small thing we did, this has given us the chance to kill many Jackal and Rooikatte.

**The most we klapped was 56 Jackals and 37 Rooikatte in ONE NIGHT.**

The reason is that this system of calling is amazing BECAUSE the bike is small and NARROW, from a way away you cannot see the bike as it is so narrow, only from the side is it larger.....

So, you go to a place and make a stand and call, the predators cannot see anything as the bike is just about non existent.

Then you use a white light full taps to blast into the night to see and scan, then you hunt on full moon so the predators think the white light is the moon, yes I am telling you this system werk moersa lekker, it is a excellent way to klap predators. I wear a white sheet also, to look like the moons shadow.

It works stukkend. Amazing, next time, go try this way, it is a lekker way to gooi at night!

Remember to ring your bell a few times on the sand road at night in case you drive into a herd of Caracals as the bike makes no noise also!

PS \* This is a true story – you must try it to believe it!

**OUBOET – “camo go wiv everything!”** 😊
