

# NAG JAG BAKKIE LIGTE

Not only is it a good idea because of South Africa's lighting predicament – but the lighting issue is always important at night in the bush.

As seen above I have a few connectors for lighting and the 12V holders on the back and sides, and these LED lights fit right in. I use normal 12V bulbs also, but they pull more power than LED.

Amazing concept at home, office and outdoors. **Multifunctional Bulb.**

I spend a lot of time at night on farms and packing up, having coffee between stands or just when light is needed these are amazing items that make a difference, I have them on the bakkie and also inside the bakkie to give good light.

They have a few settings and after use they are charged in the wall electricity at home, I have a few in my home and they are on permanently so, when the power goes out they switch on automatically, then when the power resumes they charge again.

It can be used as a torch by pulling out the stem or not, has a setting to put it OFF so when you store it - it can be stored on full charge, and also it has a remote control so if you install it in the ceiling light sockets and you are too short to reach up, a remote can switch them on and off.

Photos show the stem pulled out or inside the unit, nice for use as a torch as well, simple to operate.

If you are interested in such lights contact this company, nice people to deal with.

Rainbow Lighting CC t/a
