

# THERMAL IMAGERY THE ULTIMATE

Vir jakkals jag, jy kry nie beter nie, this is the ultimate thermal for jackal control, observation at night, it is without a doubt a real winner and the retail prices of these thermals it is fantastic value for money.

This is a real fine piece of equipment, unlike night vision that has an infra-red beam of light that jackals can see, this is thermal, it has no infra - red signature at all, and you are 100% covert. It can film what you see and has sound, can be selective between colour and black or white vision, takes video or photos and has no extra batteries that add weight to normal night vision. It has a screen on your cell phone that you look through. It is awesome, look at this link for the 13B part of predator calling, you will see an in depth article of my units here under GENERAL

<http://www.africanpredator.com/predatorcallinginfo.html>

The thermal is called THERM APP, you download the APP to your cell phone and hook up the thermal, and it is dead easy to use and has AWESOME vision in darkness and in the day. I enjoy simple to use equipment, and to record just push a button on the screen!

Contact Joseph if you need to know more, buying a Thermal you always take chances and think maybe you will make a mistake and find it's no good or you cannot see a jackal at 250-270m, if so don't worry, you will have made a great choice buying this unit, it is awesome.

Look at my website at the above link, go to general and scan down to a new 13B part series, part 13B will cover this thermal in a BIG WAY, you also get 12 parts of calling FREE and no e books, it is free, have a look, great reading.

I used night vision for a long time, problem is night vision is hard on your eyes, they are under strain, with thermal and a screen, you say good bye to eye strain.

A few things really appeal to me in a big way regarding this model – they made me decide on this model, here is the main reasons;

It does not need lots of batteries, if you use night vision we need a battery for the 12v infra-red illuminator / spotlight on the chair, and / or the battery for the illuminator on the night vision, then a battery for the infra-red laser, and these batteries are all different sizes, so now we have NO batteries, ONLY one that powers your cell phone, no others at all!

Then this model can film and take photos WITH NO extra units to be fitted to it unlike many other thermals, it also has sound and colour! And at the touch of your finger you can turn the face on the screen to show either white or black images, it takes less than one second to set it! It has a zoom and what is awesome is I can take a picture and within seconds with the thermal I can sms or email it while I sit scanning on my chair at night!

ONE MAJOR plus factor is, you can scan when the light drops at night so nothing can walk past you till you start to call at a stand, thermal is awesome, and unlike night vision that you can't switch on in the daytime, this unit you can switch on in the day or night! It can also scan through mist!

It is slim and light and has a NICE carry handle! Simple to operate and is just light years ahead of bigger and bulky thermals, for a general jackal hunter this unit will observe jackals coming into a call from easily 270m away.

If you need any info on this product I am always available to answer any questions you may have. OR contact CIS at the above info on the photos.
