

ROOIKAT PLEKKE

I was asked to briefly show typical Rooikat areas and what they look like, here is a general idea of a place I called in January of 2016 and called in a Rooikat after 36 minutes. Daniel shot him at about 70m, he ran in from about 300m away, ran like a dog!

RED arrow is a **large tree**, see it on the earth image, this is good cover areas and cattle / sheep grazing areas, note on the image following the cover all around you, these are fantastic cat places, cover, rivers, dongas and lots of ambush places for cats to catch prey.

Remember predators come to a distress sound more from curiosity than hunger so make your sounds mouth-watering. I have a huge success with cat calling, and remember WIND, cats love wind, and hy loop baie rond in wind, so roep as die wind waai, call if an EASTELY wind blows. NO MOON!

TREE shown in red below, note cover, this cannot show in detail as it's too far away, but the photo shows the bush cover with a lot of openings, great cat place.

Shot cat here

STICK TO COVER – CATS LOVE DEKING
